

The right racks for your machine

The rack portfolio – the right rack for all dishes

Winterhalter – the specialist in warewashing solutions

- + A family company for three generations
- + Represented in more than 70 countries worldwide
- + At home in the largest and best kitchens
- + Professional dishwashing technology from under counter to flight-type dishwashing machines
- + Complete solutions – machine, detergent products, water treatment and accessories – all from a single source

Winterhalter dishwashers are an essential part of your everyday business. Whether it's glasses, dishes, cutlery or other items – Winterhalter can offer you the **right machine and the right rack**. The comprehensive choice of racks meets all requirements and is characterised by its **outstanding quality** – from the functional design and high-quality materials to the meticulous care that is taken in its manufacture.

As well as tried-and-tested rack models, Winterhalter is continuously developing new products that are perfectly adapted to the latest developments in machines and dishes. With an **intelligent, integrated concept** consisting of machine technology, detergent products, water treatment and accessories, Winterhalter delivers hygienically clean washing results.

Pages **6–8** present the **Winterhalter rack portfolio** in easy-to-read tables. At a glance, you will be able to find the appropriate rack for your machine model and dishes. You will also find the current Winterhalter rack assortment, including images and information, on the Internet.

Jürgen and Ralph
Winterhalter

A systematic approach to sparkling clean results:
Winterhalter has the perfect rack for all dishes.

There are lots of good reasons to use racks from Winterhalter

Because they make a significant contribution to achieving optimum cleaning results, **racks need to offer different** properties depending on the items being washed. For example, there are robust stainless steel racks for heavy utensils whilst special racks for cutlery have particularly finely meshed bases.

Winterhalter racks appeal to customers because of **their consistently systematic** approach and high quality – **from a modular structure** and open rack **design** through to use for **storage and transport**. Furthermore, the racks offer the opportunity for optimum loading, delivering significant cost savings.

Modular structure

The height and compartment subdivision of the racks can be individually adapted to the dimensions of your glasses and dishes. Ensuring that the rack height is matched to the height of the glasses cuts down on breakages.

Hygiene through open design

The open design of the racks ensures perfect cleaning results through **optimum water and air circulation**. The dishes dry faster and there are fewer places for water to collect. **Your glasses are ready to be used again in the shortest possible time.**

The open rack offers additional advantages for dishwashing staff: it is **easy to reach and comfortable to carry**.

Perfect storage and transport system

Your dishes are in the best possible hands in stackable Winterhalter racks. Their **light weight** facilitates **transport and handling**. Transport trolleys help you to achieve **smooth and flexible logistics for dishes**. For lengthy storage, the vinyl dust cover keeps your dishes free from dust so they are always ready. **So there's no need to rewash** before use.

Economy

Winterhalter racks definitely enable you to **save money**, because their high quality means there is no need to buy **replacement racks all the time**. Precisely fitting racks reduce damage to the items being washed. This cuts expenditure on replacing breakages, which can be a very significant cost. Thanks to optimum cleaning, repeat washing is unnecessary.

Which means you save on resources such as electricity, water, detergent and rinse aid – so your **operating costs are lower**.

Which material for which use?

Plastic racks

Plastic racks are ideal for **organising large quantities of dishes and glasses**. They are light, stackable and durable. **Different colours** for top frames and compartment subdivisions help when using the racks as a **sorting and storage system**. Size L plastic racks (500 mm x 500 mm) are particularly suitable for use in rack conveyor dishwash systems.

Plastic coated wire racks

Plastic coated wire racks are characterised by the **highest possible water permeability**, so that the water jet can spray all the dishes with the least possible obstruction. Plastic coated wire racks have a **resilient plastic coating** that protects the dishes against damage. Please note: these racks can only be stacked when empty and are not suitable for use in rack and flight-type dishwashers.

Stainless steel racks

Stainless steel racks are exclusively used in utensil washers for pots, trays and utensils. Their particularly **robust construction** and special base structure are specifically designed for **large and heavy items**.

The perfect rack for every glass

The correct rack makes a major contribution to achieving optimum cleaning and drying results for your glasses. Furthermore, glasses will be protected from damage, and therefore last significantly longer. **On the two adjacent pages, you can measure your glasses – and find the appropriate racks on pages 13 – 15.**

Instructions

How to find the correct compartment size:

- First decide between **plastic coated wire or plastic racks**.
- Place the glass **centrally** on the **diameter circles (1.)** for square compartment subdivisions or, where applicable, for **rectangular compartment subdivisions (2.)**.
- You can work out the relevant compartment size by looking **down on the glass from directly above**. The compartment size may depend on the shape of the base, the bowl or possibly the handle of the glass.

How to find the rack height:

Measure the **height** of the glass using the scale shown on the edge of the page.

Please note:

Plastic glass racks cannot be **stacked** if you **put glasses** in them that are taller than the specified maximum glass height.

Plastic coated wire racks can only be stacked when empty. **Refer to pages 13 – 15 for information on suitable glass heights. Special heights are available on request.**

Glass racks

With their **open design**, Winterhalter glass racks contribute to optimum cleaning results. Racks that are precisely matched to the height and diameter of glasses guarantee **maximum safety** for your glasses.

Winterhalter recommends plastic coated wire racks **for glasses**. Their high water permeability and the fact that the glasses are positioned at an angle guarantee that these racks **offer the best cleaning and drying results**. **Dividing stays or rack extensions for tall glasses** provide optimum protection against breakage. **These racks can only be stacked when empty and are not suitable for use in rack and flight-type dishwashers.**

Plastic glass racks are provided with a **coloured compartment subdivision** depending on the glass diameter. Additional differentiation is provided by the **coloured top frame**, which is determined by the glass height. This sorting and storage system **optimises logistics for your glasses**. In addition, optional inserts make it possible to position the glasses at an angle. This prevents water remaining in the bases of the glasses, so they can dry completely.

Cutlery and small item racks

Winterhalter cutlery and small item racks have a **finely meshed base**. Different rack heights allow optimum compatibility with different products. The characteristic feature of these racks is that they **are not subdivided** and can therefore be filled as required. Winterhalter recommends: **wash cutlery standing up** in cutlery holders to achieve sparkling clean results. Mix up different cutlery pieces together in each of the cutlery holders, as too many identical pieces will result in overlaps and prevent proper cleaning.

Cutlery and small item racks	Dishes	Dimensions [mm]	Material	Product no.

Rack sizes are also applicable for the Cool, effect, Energy and ClimatePlus designs of the respective machine series.

See also pages 6–8 for a complete overview.

Plate racks and bistro / combination racks

Plate racks

The open design of plate racks ensures **maximum water permeability**. Rows or sproggets fix the plates in an optimum position. You should **load the racks as fully as possible** in order to save resources and utilise the dishwasher's full capacity. With a size L rack (500mm x 500mm), for example, you can load two plates with a max. diameter of 24cm in each row. To avoid spray obstructions and overlapping, plates **with larger diameters should be placed in rows alongside smaller plates**.

Rack sizes are also applicable for the Cool, effect, Energy and ClimatePlus designs of the respective machine series.

See also pages 6–8 for a complete overview.

Bistro / combination racks

Winterhalter bistro / combination racks are particularly suitable for **washing mixed items of glasses, cups, plates, cutlery and small items**. The bistro/combination racks are available with different compartment dividers and provide a high degree of flexibility. Dishes can be positioned securely thanks to different row spacing. We recommend using **cutlery holders for washing cutlery**.

Cup racks

Winterhalter cup racks are characterised not only by their **open design** but also by the **angled position of the rack bases**. They ensure that rinse water runs off and does not collect in cup bases guaranteeing optimum cleaning and drying. Uninterrupted rows without subdivisions permit **maximum rack loading**.

Cup rack 36 02 109

Basic racks

Winterhalter basic racks are characterised by a **coarsely meshed base** and their **water permeability** guarantees an optimum cleaning result. Depending on the dishes, the basic racks can be **combined with specially designed inserts**. This means these racks **can be used flexibly** and always match your requirements, whatever the **rack height**. Please see the rack accessories on page 20–21 for information about appropriate inserts for the basic racks.

Container and tray racks

Winterhalter container and tray racks are **available in a variety of versions**. Winterhalter offers the optimum solution, irrespective of whether you are washing trays or GN containers. The design of the **sproggets and metal brackets** facilitate **optimum positioning** of the items in these racks. Their inclined position prevents water from collecting, making a significant contribution to achieving perfect cleaning and drying. See rack accessories on page 20–21 for additional information about more container and tray inserts.

Utensil racks

Winterhalter utensil racks are individually produced for the Winterhalter utensil washer series. The **open and solid stainless steel structure** allows heavy utensils such as pots and other bulky kitchen utensils to be washed hygienically. **Special sliders** make it easy to move the racks in and out, in particular when they contain heavy items.
